Database : N_Geneseq_36:*

Pred. No. 1s the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

proccurrence in chickens

Sclaim 18; Fig 6; 127pp; English.

CC The invention relates to a recombinant fowlpox virus (FPV) whose nucleic combinant fowlpox virus (REV), and caid does not encode an active reticuloendotheliosis virus (REV), and combinant fowlpox virus. The recombinant FPV is whose genome does not contain any REV sequence. The recombinant FPV is used to produce a vaccine against fowlpox virus. The vaccine is used to prevent the occurrence of fowlpox virus in chickens. The chickens can be prevent the occurrence of fowlpox virus in chickens. The chickens can be vaccinated at older than 1 day of age. Alternatively, chickens can be vaccinated at older than 1 day of age. Prior vaccine and field strains compared for provide the vaccine subsequent to vaccination with the vaccinated at the vaccine and field strains compared for contamination provides the means by which a FPV strains carry a contamination by REV may be produced. Sequences X26110-115 represent FPV contamination by REV may be produced. Sequences X26110-115 represent FPV contamination by REV may be produced. Sequences X26110-115 represent FPV contamination by REV may be produced. Sequences X26110-115 represent FPV contamination provides the means by which a FPV vaccine free from contamination by REV may be produced. Sequences X26110-115 represent FPV contamination by REV may be produced. Sequences X26110-115 represent FPV sequences X2612-115 and TPV nucleic acid molecule can comprise a FPV LTR sequence selected from the above.

Recombinant retrovirus vector, contg. non-retroviral gene, - hability to produce progeny virus, in helper cell which can inf host cell and form provirus
Example; Page 16-17; 28pp; English.
New recombination-free, highly efficient retroviral vectors pPol11-R1 (given in Q76038), pPol11-R2 (Q76039) and pPol11-R3 (Q76040) were obtained by replacing the U3 region of the left and extension of the encapsidation region. The vectors allow cell-type specific gene expression and eliminate risks of downstream activation of cellular proto-oncogenes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                         20-0UL-1995 (first entry)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Recombinant retrovirus vector, contg. non-retroviral gene, - has ability to produce progeny virus, in helper cell which can infect host cell and form provirus.

Example; Page 17; 28pp; English.
The universal retroviral vector pPO115-R1 (given in 076041) was obtained by replacing the SV40 promoter and hpt gene of pPO111-R1 (076038) with the multiple cloning site of pBluescript II KS. The vectors allow cell-type specific gene expression and eliminate risks of downstream activation of cellular proto-oncogenes.

Example: Page 13-14; 28pp; English.

Example: Page 13-14; 28pp; English.

Rew recombination-free, highly efficient retroviral vectors new recombination of the poilt-R3 pp0111-R1 (given in 076038), pp0111-R2 (076039) and pp0111-R3 (076040) were obtained by replacing the U3 region of the left (076040) were obtained by replacing the U3 region of the left LTR of spleen necrosis virus with the IE promoter/enhancer of CMV and extension of the encapsidation region. The vectors allow cell-type specific gene expression and eliminate risks of downstream activation of cellular proto-oncogenes.

CC This sequence represents one of 5191 Staphylococcus aureus DNA sequences

CC This sequence represents one of 5191 Staphylococcus aureus DNA sequences

CC medium, preferably selected from a floppy or hard disk, random access

CC memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using

CC memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using

CC that protein-encoding or regulatory regions of commercial, therapeutic or

CC that protein-encoding or regulatory regions of commercial, therapeutic or

CC that protein-encoding or regulatory regions of commercial, therapeutic or

CC industrial importance can be obtained. Specifically, sequences which are

CC includity to encode antigens have been identified and these polypeptides can

CC saureus in a vaccine composition against s.aureus infection of

CC saureus in a sample. S.aureus is implicated in numerous human diseases,

CC including cellulitis, eyelid infections, food poisoning, osteomyelitis,

CC including cellulitis, eyelid infections, scalded skin syndrome, toxic shock

CC syndrome, etc. Organisms transformed with the DNA sequences can be used

CC computer readable medium.

 Expression promoter for genes inserted into plant seeds - e.g. heat-resistant beta-amylase gene inserted into barley seeds heat-resistant beta-amylase gene inserted into barley seeds Example 6; Page 20-21; 33pp; Japanese.
T62572 is a DNA molecule comprising a heat resistant promoter derived from a barley beta-amylase (EC 3.2.1.2) gene and other sequences used for integration of this promoter into a reporter plasmid. The plasmid is used for the production of transgenic barley plants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches

T6570 1s a heat resistant promoter derived from a barley beta-amylase (EC 3.2.1.2) gene. The promoter is used for the production of transgenic barley plants and seeds. Such plants and seeds have improved maturation properties. Sequence 1276 BP; 393 A; 237 C; 234 G; 412 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   :Y Match

Claim 1; Page 236-237; 312pp; English.
This sequence represents a nucleic acid molecule which encodes a secreted human protein. The gene number is given in the descriptor line. The gene immunoglobulin Fc portion (e.g. x20403) for increasing the stability of the fused protein as compared to the human protein only.
The invention relates to 83 novel genes and their fragments (nucleic acid sequences: x20412-x2049); amino acid sequences v00258-v00377) which
                                                                                                                                                                                                                                                                                                                                         New isolated human useful for diagnosi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; Scoreted protein; fusion protein; gene therapy; protein therapy; diagnosis; tissue; cancer; tumour; neurodegenerative disorder; leukaemia; developmental abnormality; foetal deficiency; blood; allergy; renal; ds; inmiline system; asthma; lymphocytic disease; brain; hepatic; lymphoma; cognitive disorder; schizophrenia; prostate; obesity; osteoclast; hymus; osteopprosis; arthritis; testis; lung; thyroiditis; thyroid; digestion; endocrine; metabolism; regulation; malabsorption; gastritis; neoplasm.

Also, pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the 86 polynucleotides, based on specific uses they are most highly expressed in (see X20412 for described matations).

Claim 1; Page 10-14; 21pp; Japanese.
This is the nucleotide sequence of a gene encoding a mouse SRY-related This is the nucleotide sequence of a gene encoding a protein. The gene was isolated from a mouse genomic library using a protein. The gene was isolated the primers 733009-10 as a probe. The screen isolated 4 Ecori fragments of 2.3, 2.8, 3.5 and 1.5 kb covering the gen isolated 4 Ecori fragments of 2.3, 2.8 ys. as genence between bases sequence analysis revealed a 240 bp HMG box sequence resulted in 7154-7393. Similarity with the human SRY HMG box sequence for primers being generated to amplify the human SRY HMG box sequence for primers being generated to amplify the human SRY HMG box sequence for primers being generated to amplify the human SRY HMG box sequence for primers being generated to amplify the human SRY HMG box sequence for primers being generated to amplify the human SRY HMG box sequence for primers being generated to amplify the human SRY HMG box sequence for primers being generated to amplify the human SRY HMG box sequence for primers being generated to amplify the human SRY HMG box sequence for primers being generated to amplify the human SRY HMG box sequence for primers being generated to amplify the human SRY HMG box sequence for primers being generated to amplify the human SRY HMG box sequence for primers being generated to amplify the human SRY HMG box sequence for primers being generated to amplify the human SRY HMG box sequence for primers being generated to amplify the human SRY HMG box sequence for primers being generated to amplify the human SRY HMG box sequence for primers being generated to amplify the human SRY HMG box sequence for primers being generated to amplify the human SRY HMG box sequence for primers being generated to amplify the human SRY HMG box sequence for primers being generated to amplify the human SRY HMG box sequence for primers being generated generated generated generated generated generated generated generated generated gen

PT New isolated fungal pathogenicity genes

CC The invention relates to new isolated fungal pathogenicity genes.

CC The invention relates to new isolated fungal pathogenicity genes.

CC grisea. These novel genes encode proteins (706783-86) that are highly commologous to the fungal carnitine acetyl transferase enzyme, fungal casciated pathogenicity protein or fungal nembrane comparts are pathogenicity. The novel genes are implicated in fungal casciated pathogenicity. The novel genes are implicated in fungal created fungus. The isolated genes are useful in the design of screens to sequence represents the PTH12 gene sequence.

Sequence represents the PTH12 gene sequence.

US-09-226-568-18/c

Sequence 18, Application US/09226568

Patent No. 6001992

GENERAL INFORMATION:

APPLICANT: Ackermann, Elizabeth J.

APPLICANT: Bennett, C. Frank

APPLICANT: Bennett, C. Frank

APPLICANT: Marcusson, Eric G.

TITLE OF INVENTION: Antisense Modulation of No.

FILE REFERENCE: ISPH-0337

CURRENT APPLICATION NUMBER: US/09/226,568

NUMBER OF SEQ ID NOS: 39

SOFTWARE: Patentin Ver. 2.0

LENGTH: 3934

TYPE: DNA

CORGANISM: Homo sapiens

FEATURE:

OTHER INFORMATION: Description of Artificial Secondarion of No.

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pleter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             151 ugugugunugunagunaccungugunuguncgucacungucgacagcgcccugcgaanug 210
